Education

UNIVERSITY OF WASHINGTON BOTHELL

Bothell, WA

Bachelor of Science in Computer Science and Software Engineering

GPA 3.8 | Expected Graduation: December 2026

- **Certification:** AWS Certified Cloud Practitioner
- **Related Coursework:** Object-Oriented Programming, Data Structures and Algorithms, Calculus, Linear Algebra, Databases, Operating Systems, Web Development

Experience

MERCURY'S COFFEE

Bothell, WA

Lead Barista | Mercury's (2025–Present, part-time); Wake Up Call (2023–2025) March 2023 - Present

- Led and trained a team of 5+ baristas, improving service efficiency during peak hours
- Designed workflow improvements that reduced average customer wait time by 15%
- Coordinated team operations during peak hours to maintain service quality and speed

Projects

SCREEN TIME APP (SwiftUI + Supabase)

Current

- Building an iOS accountability app with SwiftUI and Apple's Screen Time APIs to support healthy device usage
- Designing a Supabase backend with PostgreSQL, authentication, Row Level Security (RLS), and REST APIs
- Implementing friend requests and focus sessions using MVVM in a two-quarter capstone

MOOD TRACKER (Full-Stack Web App)

September 2025

- Built a full-stack wellness application with React, Express, Prisma, and PostgreSQL for mood, journal, and habit tracking
- Designed REST APIs and a relational data model with JWT authentication, HTTP-only cookies, and anonymous city-level mood aggregation
- Containerized the application with a multi-stage Docker build and deployed it to ECS Fargate with ECR, private RDS, Secrets Manager, and TLS
- Automated ARM64 deployments through GitHub Actions using CI/CD, monitoring, rollback detection, and production health checks

POLLPAL (Election Information Platform) for Husky Hackathon

Team Member

April 2025

- Developed a React and Express election-information platform during a 48-hour team hackathon
- Integrated external election APIs and deployed the application to AWS EC2 through a CI/CD workflow
- Earned second place for technical execution and project impact

REAL-TIME LEADERBOARD (Redis + Socket.IO)

Current

- Built a real-time leaderboard with Express, Socket.IO, and Redis sorted sets for instant ranking updates
- Designed REST endpoints for score submission, top-10 queries, and health monitoring
- Containerized and deployed to AWS ECS with ElastiCache; implementing GitHub Actions CI/CD

Skills

Programming Languages: JavaScript, Python, C++, TypeScript, Swift, SQL, HTML/CSS

Frameworks/Tools: React, Node.js, Express, PostgreSQL, SwiftUI, Supabase, Git, GitHub, AWS

Concepts: Data Structures and Algorithms, REST APIs, Database Design, Authentication, Security
